

XSS injection vulnerability exists in address parameter of submit_student.php file of College Management System

With XSS, cybercriminals can turn trusted websites into malicious ones, thus causing inordinate harm and damage not only to the victims but also to the reputation of the trusted website's owner.

Websites that are compromised by XSS can cause any number of threats to attack a user's system. This can involve anything from inappropriate content being displayed to malware being downloaded onto the system without the user knowing.

Payload: address=555'"()&%<zzz><ScRiPt >alert(9937)</ScRiPt>
