XSS injection vulnerability exists in lastname parameter of /admin/employee_edit.php and /admin/employee.php file of Online Payroll System in PHP and MySQL Free Download A Comprehensive Guide

After modifying the value of lastname in the /admin/employee_edit.php, a JavaScript function will be displayed in the /admin/employee.php.

With XSS, cybercriminals can turn trusted websites into malicious ones, thus causing inordinate harm and damage not only to the victims but also to the reputation of the trusted website's owner.

Websites that are compromised by XSS can cause any number of threats to attack a user's system. This can involve anything from inappropriate content being displayed to malware being downloaded onto the system without the user knowing.

Payload:

address = 555&birthdate = 01/01/1967&contact = 1&edit = &firstname = pHqghUme&gender = Female &id = 1&lastname = pHqghUme < ScRiPt%20>alert(12345) < /ScRiPt>&position = 1&schedule = 1
